

Stephen Hadley is Senior Program Officer and provides CMC support in the Vaccine Development group in Global Health at the Bill & Melinda Gates Foundation. His primary focus is supporting translational science and early clinical programs supported by the Foundation that require a supply of recombinant proteins or monoclonal antibodies for research and GMP work. Programs supported include HIV/AIDS, malaria, and TB. Evaluation of innovative development and manufacturing technologies that enable low cost, rapid development of new therapeutic proteins at low in-market COGS is an important aspect of the position.
