

Peter Deuss completed BSc and MSc Chemistry studies at the University of Amsterdam, NL after which he obtained his PhD based on bioinspired catalysis research performed in the group of Paul Kamer at the University of St. Andrews, Scotland in 2011., After postdoctoral work at MRC UK, Laboratory of Molecular Biology Cambridge in the group of Mike Gait. In 2013, he moved to the University of Groningen, working in the groups of Katalin Barta and Erik Heeres working on the catalytic conversion of renewable resources to chemicals. He started in 2016 as a tenure track assistant professor at the chemical engineering department of the Engineering and Technology Institute Groningen (ENTEG). He recently got promoted to Associate Professor Catalytic Processing of Sustainable Resources.
